Prunus subhirtella 'Autumnalis' - Higan Cherry

Cherry Allée at Foulkeways 2001

Prunus x okame
'Okame' Cherry

Prunus sargentii
'Sargent' Cherry

Prunus x 'Hally Jolivette'

Prunus shirotae - 'Kwansan' Cherry

Cercis canadensis - Eastern Redbud Tree

Prunus x 'Hally Jolivette'

Prunus subhirtella 'Autumnalis' - Higan Cherry

Prunus serrulata - 'Kwanzan' Cherry

Prunus x 'Hally Jolivette'

Prunus x 'Hally Jolivette' is a rounded, dense, cherry tree of relatively fine texture growing approximately 15 feet high. The flowers are pink in bud, opening white, double, 1-¹/₄" in diameter and effective over a 10 to 20 day period in late April. One of the very nicest cherry trees developed by a great cytologist at the premier Arboretum in the United States.

Prunus x okame
'Okame' Cherry

Prunus x okame - *'Okame' Cherry* is a hardy cherry growing 15 to 25 feet tall and up to 20 feet wide with an upright, rounded crown. The foliage is dark green and of medium texture, giving way to a coppery orange/yellow color in fall. Flowers are pink and showy with red features. The bark is reddish-bronze with prominent horizontal features.

Prunus sargentii
'Sargent' Cherry

Prunus sargentii - *'Sargent' Cherry* is one of the most useful cherries available. It grows 40 to 50 feet in height with a spread approximately equal to height. The flowers are pink, 1 to 2" across, appearing in late April to early May. The fruit is a 2/5" long, ripening in June and July. The foliage is an excellent shiny dark green in summer and changes to bronze or red in the fall. The new leaves are reddish tinged as they emerge. The bark is rich, polished reddish to chestnut brown.

Prunus serrulata
'Kwanzan' Cherry

Prunus serrulata - *'Kwanzan' Cherry* varieties grow 20 to 25' with a vase-shaped or upright habit. The new foliage is often reddish tinged and eventually changes to lustrous dark green at maturity. Fall color is often a good bronze to subdued red. The flowers are greatly variable but range from single to doubles, white to pinks, and up to 2-½" in diameter. They usually flower in April to early May and are borne profusely along the stems, usually before or with the leaves.

Prunus subhirtella 'Autumnalis'
Higan Cherry

Prunus subhirtella 'Autumnalis' - Higan Cherry. These cherry trees grow to 20 - 40 feet with a spread of 15 to 30' or more with a gracefully weeping habit. The flowers are single pink/white, 1/2" in diameter, blooming in March-April before the leaves, 2 to 5 flowered umbels. The fruits are round, 1/3" diameter, shining black.

Chionanthus retusus
Fringetree

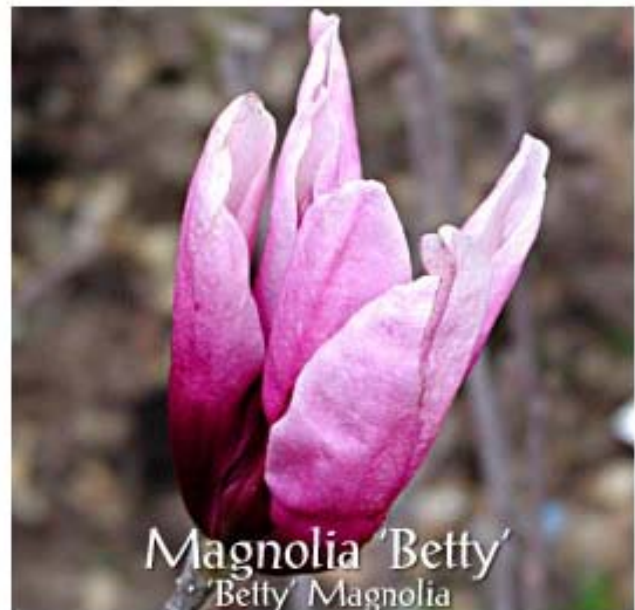

Chionanthus retusus - *Fringetree*. Flowers are white, fragrant, in 6 to 8" long, fine, fleecy, soft textured bundles emerging in May to early June just as leaves are expanding to point of complete development, on previous season's wood. Fruit is dark blue, fleshy, and bloomy, effective in August to September. Leaves are elliptic to oblong, 3 to 8" long of medium to dark green, sometimes lustrous. Fall coloring is usually yellow-green-brown but can range from a bright to golden yellow. A low-maintenance tree; pruning is rarely required. Excellent in groups, borders, near large buildings, and outstanding in flower.

Cercis canadensis
Eastern Redbud Tree

Cercis canadensis - *Eastern Redbud Tree*. Grows to 20 to 30 feet in height by 25 to 35 feet in spread, usually with the trunk divided close to the ground and forming a spreading, flat-topped to rounded crown. A very handsome tree with gracefully ascending branches and a "touch of class." Flowers are reddish purple in bud, opening to a rosy-pink with a purplish tinge, $\frac{1}{2}$ " long, opening in April for 2 to 3 weeks. Leaves are 3 to 5" across, often wider than long. New growth when emerging is a reddish purple and gradually changes to a dark, often somewhat lustrous green in summer; fall color is usually a yellow-green to yellow.

Magnolia liliiflora
'Betty' Magnolia

Magnolia liliiflora - *'Betty' Magnolia* is an outstanding new late blooming cultivar developed at the U.S. National Arboretum. Betty has large, abundant, reddish-purple flowers opening before the leaves producing a magnificent display. Foliage remains attractive all season. Betty is a rather erect shrubby grower that will attain a height of 10 feet and a width of 8 feet. No other flowering plant makes such large, showy and colorful blooms.

Hierochloa odorata 'Sweet' Grass

Hierochloa odorata – 'Sweet' Grass. This perennial grows at the edges of ponds and marshes all over North America. A low-growing grass, it has a typical height of about 1 foot with white flowers. The grass leaves give off a wonderful vanilla scent as they dry. Often it has a reddish-purple color near the base of the plant. The inflorescence is an open, pyramid-shaped golden brown flower cluster with slender branches.

Miscanthus sinensis
'Adagio' Grass

Miscanthus sinensis – 'Adagio' Grass grows up to 5 feet in height with a fine texture and very narrow leaves. Flowers appear in August with a red tint, turning to yellow in the fall.

Pennisetum orientalis
Oriental Grass

Pennisetum orientalis – Oriental Grass grows to a height of 1 to 2 feet in a dense, compact form with green to grayish-green leaves. Fluffy, nearly white flowers with pink tones appear summer to fall.

Calamagrostis x acutiflora
'Karl Foerster' Grass

Calamagrostis x acutiflora – 'Karl Foerster' Grass. This clump grass has an upright habit, topped with showy, feather plumes and erect wheat-colored seed heads. Growing to 5 feet tall, it retains its good looks in all seasons. *Calamagrostis x acutiflora* 'Karl Foerster' has dark-green foliage and forms a purple inflorescence during May. It holds this color for six weeks, giving way to a straw color at the end of June which holds for the remainder of the season.

Miscanthus sinensis
'Morning Light' Grass

Miscanthus sinensis – 'Morning Light' Grass. A variegated form of Maiden Grass with a small white stripe down the center of its leaves, giving the illusion of silver-gray foliage. It typically grows 4 to 5 feet in height with a silvery-white bloom in September - November.

Muscari armeniacum
'Grape' Hyacinth

Muscari armeniacum - 'Grape' Hyacinth. A small perennial Spring-blooming bulb maturing at about 10" tall by 8" wide when in foliage and flower. The flowers are purple/purple-blue, appearing for about two weeks in late April and early May, composed of many miniature purplish-blue flowers of fine texture and thick density. Winter foliage is dark green, emerging in late August or early September and remaining green throughout most winters, tolerant of temperatures down to 0 °F. The plant propagates itself over time, by bulb offsets and seed dispersal.

Hyacinthoides hispanica - 'Excelsior' Spanish Blue Bells

Hyacinthoides hispanica - 'Excelsior' (Spanish Blue Bells). A stunning blue flowering bulb, growing to 12" to 18". Finely textured, fragrant flowers appearing in bundles in Spring. A beautiful perennial which reproduces by bulbing. Also included is a *Hyacinthoides hispanica* mix, a blue and white variant of *Hyacinthoides hispanica* (not pictured).

Narcissi passionale

Narcissi passionale. A white and pink daffodil, growing to a mature height of 12 to 18" with flowers appearing in late April/early May. A delicately scented late-blooming daffodil blooming 4" award-winning white overlapping perianth around a yellow-pink perianth around a yellow-pink cup with a ruffled edge and a rolled rim.
